GRC readiness report

Sample company (synthetic data) · run on 09 Nov 2026

High	Medium	Low	Checks run	Checks skipped
7	8	0	10	2

Findings by area

Area	Findings
Rule set	3
Controls	4
Emergency	8

Summary (written by Claude from the findings)

The data is not ready to migrate as-is: there are 7 High findings, concentrated in emergency (firefighter) access and in control ownership and mitigation. Rule set quality is also a concern, with an undetectable risk (B010), a duplicate risk definition (P002) and missing ownership. Fixing the owner, monitor, mitigation and firefighter review gaps first would remove most of the High-severity exposure.

Top 10 findings

#	Severity	Area	Record	Reason
1	High	Rule set	B010	Active risk has no active functions, so it can never be detected.
2	High	Controls	MC_SEC_02	Owner RTAYLOR is not an active user (left or locked).
3	High	Controls	MC_P2P_01 -> KLEE (P001)	Mitigation assignment expired on 2026-09-30; the risk is now unmitigated.
4	High	Emergency	FF_FIN_01	Firefighter ID assigned to 6 users (limit 5).
5	High	Emergency	FF_BASIS_01 session OKHAN 2026-10-20 07:55:00	Log review request 9000000103 still open; due 2026-10-27.
6	High	Emergency	FF_BASIS_01 controller DGRAY	DGRAY is both a firefighter and the controller of this ID, so can review their own sessions.
7	High	Emergency	FF_BASIS_01 owner	Owner RTAYLOR is missing or not an active user.
8	Medium	Rule set	P002	Same active functions as risk P001: duplicate definition, double-counted violations.
9	Medium	Rule set	B010	Risk has no owner and no business process.
10	Medium	Controls	MC_SEC_02 monitor	Monitor OLEFT is not an active user (left or locked).

Read-only analysis of uploaded exports. Findings come from fixed rules; people decide every fix. Not affiliated with SAP SE.

Rule set (3)

Check	Severity	Record	Reason	Recommended action	Source
1	High	B010	Active risk has no active functions, so it can never be detected. *Risk B010 is active but has no active functions, so no user can ever be flagged against it. If migrated as-is, this gives a false sense of coverage for a risk that is never checked.*	Deactivate the risk or attach the correct functions.	access_rule_detail.csv row 7
1	Medium	P002	Same active functions as risk P001: duplicate definition, double-counted violations. *Risk P002 uses the same active functions as P001, so it is a duplicate definition. Migrating both would double-count violations and inflate risk reporting.*	Merge the two risks or differentiate them.	access_rule_detail.csv row 5
3	Medium	B010	Risk has no owner and no business process. *Risk B010 has no owner and no business process. Without them, it is unclear who is responsible for it or where it applies, which makes it hard to manage or report on.*	Assign an accountable owner and business process.	access_rule_detail.csv row 7

Controls (4)

Check	Severity	Record	Reason	Recommended action	Source
4	High	MC_SEC_02	Owner RTAYLOR is not an active user (left or locked). *Control MC_SEC_02 is owned by RTAYLOR, who is no longer an active user (left or locked). Nobody is accountable for the control, so it could go unmaintained and unreviewed after migration.*	Reassign the control to a current owner.	mitigating_control_report.csv row 3
5	High	MC_P2P_01 -> KLEE (P001)	Mitigation assignment expired on 2026-09-30; the risk is now unmitigated. *The mitigation of KLEE under MC_P2P_01 for risk P001 expired on 2026-09-30, so this risk is now unmitigated. Migrating as-is would carry over a live, uncovered violation with no compensating control.*	Renew after review or remove the access.	mitigated_object_report.csv row 3
4	Medium	MC_SEC_02 monitor	Monitor OLEFT is not an active user (left or locked). *The monitor of control MC_SEC_02, OLEFT, is not an active user (left or locked). The control is not being monitored, so failures could go unnoticed.*	Assign a current monitor.	mitigating_control_report.csv row 3
5	Medium	MC_P2P_01 -> JDOE (P001)	Mitigation assignment expires on 2026-12-31; the risk will become unmitigated. *The mitigation assignment for JDOE under MC_P2P_01 for risk P001 expires on 2026-12-31. After that date the risk will be unmitigated unless the assignment is renewed or replaced.*	Renew after review or remove the access.	mitigated_object_report.csv row 2

Emergency (8)

Check	Severity	Record	Reason	Recommended action	Source
7	High	FF_FIN_01	Firefighter ID assigned to 6 users (limit 5). *Firefighter ID FF_FIN_01 is assigned to 6 users, one above the limit of 5. Too many people sharing a privileged ID weakens accountability and widens the exposure to misuse.*	Reduce to the people who genuinely need emergency access.	firefighter_ids.csv + controllers.csv row 2 / 2 firefighter_ids.csv + controllers.csv row 3 / 2 firefighter_ids.csv + controllers.csv row 4 / 2
9	High	FF_BASIS_01 session OKHAN 2026-10-20 07:55:00	Log review request 9000000103 still open; due 2026-10-27. *The log review request 9000000103 for the FF_BASIS_01 session by OKHAN on 2026-10-20 is still open, with a due date of 2026-10-27. If the review is not completed, privileged activity goes unchecked and the audit trail is incomplete.*	Controller to review now.	consolidated_log_report.csv row 5
10	High	FF_BASIS_01 controller DGRAY	DGRAY is both a firefighter and the controller of this ID, so can review their own sessions. *DGRAY is both a firefighter and the controller of FF_BASIS_01, so can review their own sessions. This breaks segregation of duties over emergency access and means misuse could go unchallenged.*	Assign a controller who cannot use this firefighter ID.	firefighter_ids.csv + controllers.csv row 9 / 3
12	High	FF_BASIS_01 owner	Owner RTAYLOR is missing or not an active user. *The owner of FF_BASIS_01 is missing or not an active user (RTAYLOR). Without an accountable owner, access to this firefighter ID cannot be properly approved or reviewed after migration.*	Assign a current owner.	firefighter_ids.csv + controllers.csv row 8 / 3
8	Medium	FF_BASIS_01 session OKHAN 2026-10-20 07:55:00	No reason given. *The FF_BASIS_01 session by OKHAN on 2026-10-20 has no reason recorded. Reviewers cannot judge whether the emergency access was justified, which weakens the audit evidence.*	Require a ticket number and specific reason before logon.	consolidated_log_report.csv row 5
8	Medium	FF_FIN_01 session KLEE 2026-10-06 22:40:00	Reason missing or too vague: 'fix'. *The reason for the FF_FIN_01 session by KLEE on 2026-10-06 is just 'fix', which is too vague to justify privileged access. Reviewers cannot tell whether the activity was appropriate.*	Require a ticket number and specific reason before logon.	consolidated_log_report.csv row 3
11	Medium	FF_BASIS_01 session OKHAN 2026-10-20 07:55:00	Sensitive actions used: SU01. *SU01 (user administration) was used in the FF_BASIS_01 session by OKHAN on 2026-10-20. This is a sensitive action, so it needs careful log review to rule out inappropriate user changes.*	Controller to confirm each against the stated reason.	consolidated_log_report.csv row 5
11	Medium	FF_FIN_01 session KLEE 2026-10-06 22:40:00	Sensitive actions used: SE16N. *SE16N (direct table display) was used in the FF_FIN_01 session by KLEE on 2026-10-06. This is a sensitive action that could expose financial data, so the session needs a careful log review.*	Controller to confirm each against the stated reason.	consolidated_log_report.csv row 3

Appendix

Checks

#	Check	Status
1	Risks with no active functions, or duplicate definitions (same function set).	Run
2	Function actions that no longer exist in the system or were never used (needs optional columns).	Skipped (input not supplied)
3	Risks with no owner or no business-process mapping.	Run
4	Mitigating controls with no owner or an owner who has left.	Run
5	Mitigation assignments expired or expiring within the window.	Run
6	Controls assigned but never evidenced (needs optional last_evidence_date column).	Skipped (input not supplied)
7	Firefighter IDs assigned to too many users.	Run
8	Emergency sessions with vague or missing reasons.	Run
9	Emergency logs not reviewed within the agreed window.	Run
10	Controller reviewing their own emergency session (self-review).	Run
11	Sensitive actions run during emergency sessions.	Run
12	Firefighter owners or controllers missing or no longer active.	Run
